

Filippo M. Libardi

AI Engineer – agentic GenAI, computer vision and real-time graphics

✉ filippo.libardi@gmail.com | 🌐 filippolibardi.co.uk | 🏠 FilippoL | 📍 Rome, Italy

Computer vision and deep learning engineer with a decade across research, biomedical imaging and real-time 3D, now building multi-agent GenAI products as a technical co-founder.

EXPERIENCE

CTO & Co-founder

Italy

Pecus Chain

Jan 2026 – present

- AI SaaS predicting mastitis risk for dairy farms: LSTM risk models and an NLP copilot on FastAPI + Supabase, React dashboard, deployed via CI/CD.
- Multi-agent GenAI stack built on LangChain: tool-calling loops, human-in-the-loop triage over a veterinary knowledge base, traced and evaluated with Langfuse and Langtrace.

VP of Product & Co-founder

Italy

ClusTEQ

2025 – Jul 2026

- Next-gen BIM platform on game-engine tech: C++20 ECS engine with real-time rendering (Vulkan/DX12) and Qt 6 CAD/BIM tooling.

Computer Vision Engineer

Rome, IT

Technolife

Feb 2025 – Jan 2026

- Real-time object detection and tracking (OpenCV), CNN fall detection on embedded devices, and ML CI/CD pipelines.

Software Engineer

Remote

Teoresi Spa

Apr 2022 – Jan 2025

- SCRUM lead for biomedical desktop apps: DICOM imaging tools with auto-stitching in Qt/OpenCV/C++.

Software Engineer Intern

Milan, IT

Zuru Tech

Nov 2021 – Mar 2022

- Procedural generation tools for parametric BIM models, extending a C++ ECS in UE4 with automated tests.

EDUCATION

Utrecht University

Utrecht, NL

M.Sc. Artificial Intelligence

Sept 2019 – Jul 2021

London Metropolitan University

London, UK

B.Sc. Computer Games Programming

Sept 2015 – Jul 2018

PROJECTS & PUBLICATIONS

NrPPG-NNET

MSc thesis, Teoresi Spa – Utrecht, NL – 2021

- End-to-end deep learning for contactless heart-rate estimation from facial video, learning over spatial-temporal representations for telemedicine use; shipped an accompanying Python facial-feature package. Published on ResearchGate.

The Rise of Decentralised Systems

Research paper – 2020

- Examines decentralised system architectures as a response to the privacy-policy shortcomings of centralised platforms, weighing the trade-offs they impose on control, trust and data governance. Published on ResearchGate.

Multimedia Retrieval System

Qt – 3D shape descriptors

- Content-based search engine over a 3D mesh database: shape feature extraction, custom similarity metrics for ranking, and an interactive Qt front-end for query-by-example over the collection.

3D Game Engine

DirectX 11 – FMOD

- Engine written from scratch as the runtime for *Zombie Holocaust*: skeletal animation, 3D positional audio through FMOD, and a collision-detection system driving gameplay.

SKILLS

Languages	C++, Python, C#, JS/TS	GenAI	LangChain, Langfuse, Langtrace, RAG
ML	PyTorch, TensorFlow, OpenCV	Agentic	Multi-agent orchestration, tool-calling
Web & Data	FastAPI, React, PostgreSQL, Supabase	Graphics	Qt 6, Unreal, OpenGL, Vulkan
Viz	Matplotlib, Seaborn, Bokeh	DevOps	Docker, GitHub Actions, CMake
